Title

- Escape the Robot Facility

Concept Statement

What is your concept? Is it a puzzle game in which an alien must find his way home? Or is it a game like Outlast in which the main character needs to find crucial information in an 'abandoned' hospital? This is where you outline what the main idea of the game will be.

- The player is in the role of a robot attempting to escape from a robot facility by hiding and avoiding detection from other robots.
- You start the game in a facility that is located on a planet inhabited by robots. Within the facility you are being held in a cell, where you will need to break out by bending the bars. After that there will be screws, bolts, and oil cans that you can collect along the way. The screws and bolts that you pick up will keep track of your points, while the oil cans that you pick up will give you a power up that allows you to become undetected by the guards. There are also objects such as steel bins all around the facilities. These steel bins will provide a good hiding spot away from the guards for you.
- After you break out of your cell you have to hide behind the steel bins before the guard sees you. If you come within range of the guard you will be caught and taken back to your cell.
- As you travel further into the facilities you will come across a janitor. This janitor will be able to give you a hint on how to get past the guards and provide a good place for you to hide from an oncoming guard.
- Once you reach the end of the facilities you will see a door with an exit sign above it. On the other side of that door is a vehicle waiting for you, so you can escape the facilities.
- It's a platform game so there will be two levels for the player to utilize. They can jump onto the second level platform.

Genre

- Stealth/Action/Platform
- The main genre of this game would be stealth, with the sub-genres being platformer and strategy, while the overall flavor of the game is sci-fi.

Mechanics

The game mechanics refer to different aspects of the game. Very simply, they are the visuals, sounds, animations, physics, and more. In specific detail.

- Visuals
 - You Failed Screen
 - Congrats Screen
 - UI stuff i.e. menu
- Sounds
 - background music
 - Sound effects
- Animation
 - Walking
 - Jumping
- Choose a character from a set of characters (Maybe?)
- Score (?)
 - The player can compete to collect all or most of the coins in the fastest amount of time.
- Timer (?)
 - The player can compete for the fastest time with others playing the game
- Score Board (?)
 - Players can see this before playing the game. After playing they can add their own name, like in arcade games.
- Enemy Detection
 - There will be a warning noise and the character will turn red the closer the guards get to them
- Skip button option

The Story

Delving deeper, you need to flesh out the descriptions of the story, setting, and who the characters will eventually be. What will your story be? Will it have multiple character arcs, or just one?

- In this universe there is a robot trying to break out of prison. The robot was there after stealing robot money. There are guards on the lookout trying to catch the escaped robot. The goal of the robot is to not get caught by the guards and make it to the vehicle waiting for it.
- The main character is a robot. The robot is sitting in their cell when they get a radio signal from one of their friends. The friend says "Hey, dude I heard you're stuck in jail. I can help you get out." You say "Okay, cool thanks dude. How do I get out of here?"
- *Friend says "I'll be waiting at the exit, so all you need to do is play a bit of hide-and-seek with a touch of red light, green light thrown in as you make your way to the exit."

- OR Friend says “First bend the bars. Then watch out for two different types of guards. You’ll get a signal and start to glow red when they are near. That’s when you need to find a spot to hide and wait for them to pass by. You can hide behind oil bins and worker robots....

Characters:

characters all have distinct personalities, and you must do the same for your characters. What are their wants, needs, and motivations?

This is where you fully flesh out our protagonists, antagonists, ancillary characters, and more. This is where your roster of loveable, (or perhaps not so loveable), characters will go to grow and develop into finished products.

- Main character (Player)
- Guard #1:
 - This NPC is walking/pacing back and forth (left to right) in one location. The player could get caught if they are in range of it.
 - Attributes:
 - It is made up of squares and rectangles and looks like a toy.
 - It is wearing a hat with an antenna that says “security” and has a simple robot picture.
 - It is also wearing handcuffs on its hip.
 - It has the word “GUARD” written across its chest.
- Guard #2:
 - This NPC is hovering/pacing back and forth (left to right) and it occasionally shoots lasers that could get the player caught.
 - Attributes:
 - It is made up of ovals and resembles a penguin with no feet.
 - It is wearing a hat with an antenna that says “security” and has a simple robot picture.
 - It is also wearing handcuffs on its hip.
 - It has the word “GUARD” written across its chest.
- Robot Worker:
 - This NPC is mopping the floors. It has info to share and can provide the player with hints. Players can use it to hide from guards in that area.
 - With the help of thi NPC the player is able to get hints if they are stuck or they can use it as a hiding place from the guards in order to move forward in the game.
 - Attributes:
 - It has two antennas and is made up of squares and has triangle wheels.

- It has a mop bucket that says “WET FLOOR CAUTION” and a mop handle sticking out of the bucket.
- It has the word “JANITOR” written across its chest.

-

Setting:

- The setting is kind of an apocalyptic cyber theme in a robot only world. The world was created for and by robots/machines.

Target Audience:

- The typical age range for this game is around about 13 to 25, so teens and young adults. The game can be played by both genders.

Levels:

- This is in a fantasy sci-fi world. The action of the story will take place in a robot prison that kind of looks like a factory. It will be a little rusty, dark, and dull in color.

User Interface:

- Health bar (oil can)
- Menu
 - Exit
 - Pause
- Timer
- Points

Technical:

- Godot game engine will be used to create the game. Pixelorama will be used for the images and animations. A royalty free site will be used for sound.

Assets:

These are actually the assets used in-game. For example, assets can be specific objects and in-game items.

-

Project Status Report

Think of this as a regular progress report. You can even add some milestones for you and the team to complete to get an idea or roadmap of the project better.

- Started around May 5 Finished creating all of the characters and some creatures around May 21
- **First**
- Mon. June 2
 - Finish animating everything
- Fri. June 6
 - Finish creating environment tiles/floors
- Wed. June 11
 - Finish building side scrolling background
- Wed. June 18
 - Put everything in Godot

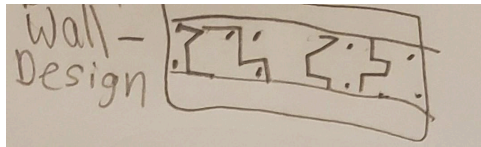

- Tues. June 24
 - Find and add sound
- Thurs. June 26
 - Test
- Fri. June 27
 - Upload final product to itch.io
-
- **Second**
- Wed. June 4
 - Finish animating everything
- Wed. June 11
 - Finish creating environment tiles/floors
- Wed. June 18
 - Finish building side scrolling background
- Wed. June 25
 - Put everything in Godot
- Mon. June 30
 - Find and add sound
- Tues. July 1
 - Test
- Weds. July 2
 - Upload final product to itch.io

The game is a stealth-based 2D platformer, where you play as a robot who wakes up in a reprogramming factory right after gaining free will. Now, you must escape the factory by outsmarting the patrol guards and collecting scattered bolts before you're reset and lose your free will.

P.S. Be sure to check the game controls before making your escape!

Storyboard: Tutorial

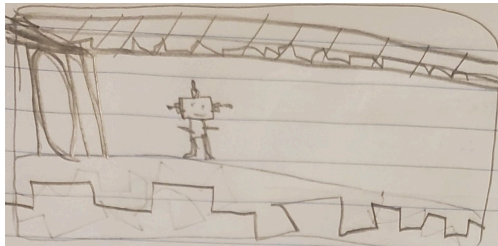

General/Overall:

- The background music throughout the game is punk factory sounds. The player makes a clunking sound (metal on metal tapping) when walking. The graphic style theme for the overall background is animated toy factory punk with metal gray, blue, and purple. Back wall is uneven panels with bolts. The floor is uneven flooring. The second floor has the same flooring as the first floor. It has a railing and stairs leading up to the second floor.

1. Load screen/Start menu

- a. There is a jail cell with two bent bars. Then a guard chasing the player and the player running away towards the exit with the vehicle showing. In the lower right hand corner in descending order it says "START", "SAVE", "LOAD", "OPTION".

2. Player walking out of cell

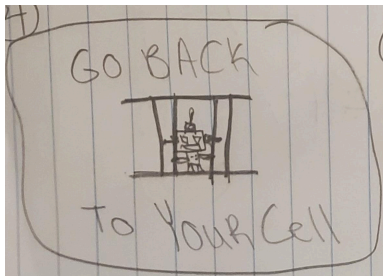

- a. This is the beginning of the game. The player starts the game inside a jail cell. They bend the bars to leave the cell. The bars make a metal bending sound. Jail cell bars are bent and the player is standing outside the cell.

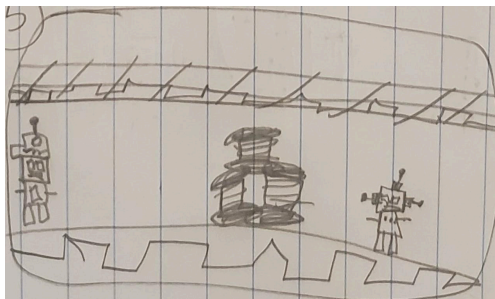

3. Player walking in range of guard #1
 - a. The player is walking and comes across a guard and a stack of steel drums in front of them. They will get caught and go back to their cell if they are caught by the guard.

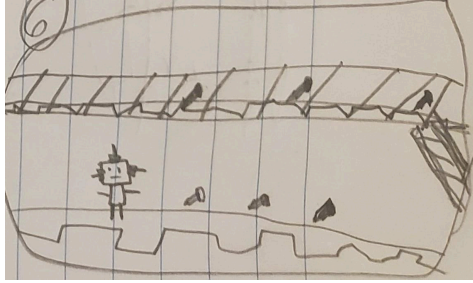

4. Player is going back to cell after being caught
 - a. The player got caught by the guard. The player did not hide and got caught within range of the guard. They have to go back to their cell. The scene shows the player behind bars with "GO BACK" written above the image and "TO YOUR CELL" written below the image. A failure sound (police sirens and a dun dun and a cell door slamming shut sound) when the player gets caught and has to go back to their cell.

5. Player hiding from guard#1
 - a. Before the player is caught within range of the guard they hide behind the stack of steel drums and wait for the guard to pass.

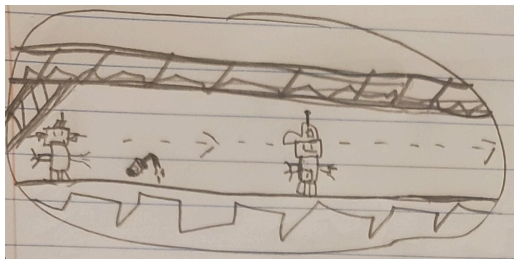

6. Player walking pass guard #1
 - a. The player successfully hides from the guard. They now come out of hiding and continue to walk pass the guard to the exit.

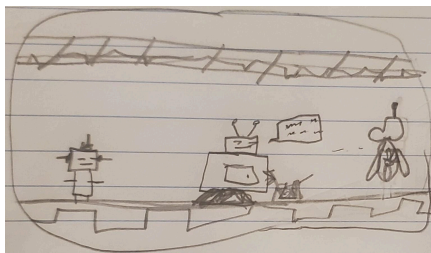

7. Collecting coins/points (along the way, in the shape of screws(5000 pts. and bolts(10000 pts.))

- a. The player is collecting coins/points in the shape of screws along the way. Every time the player collects a screw there is a money/cha-ching sound. The screws are hovering a few centimeters above the ground in front of the player. As the player collects the screws, the screws disappear.

8. Collect power up to hide in plain sight/ walk right past the guard (last 5 seconds)

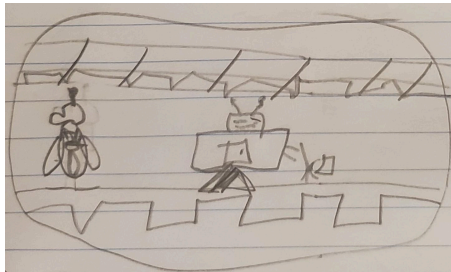

- a. The oil can is hovering a few centimeters above the ground and a guard in front of the player. The player can collect the oil can and use it to walk right past the guard without needing to hide. The player collects a power up in the shape of an oil can. This allows the player 5 seconds to become unnoticed by the guards. There is a "rusty metal" being oiled sound when the player collects/applies the power up.

9. Talking to janitor

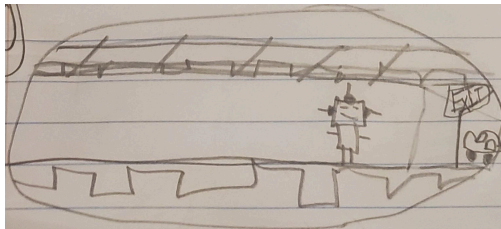

- a. There is a janitor mopping and a guard in front of the player. The player can talk to the janitor for a hint on how to pass the guards. The player can hide behind the janitor before they get by the guard. The janitor asks the player if they want to hide behind them. The player answers yes/no. Then the janitor asks the player if they want a hint on how to pass the guards. The player answers yes/no. When the janitor talks it is robotic beeping sounds and what the janitor is saying is in a

speech bubble. When the player responds there are answer buttons below the speech bubble. The janitor gives the player the hint before the guard shows up.

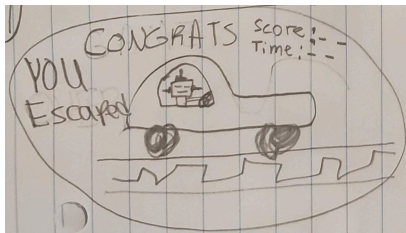

10. Player hides behind janitor

- a. The player chooses to hide behind the janitor. If they don't they get caught and sent back to their cell. The player is hiding behind the janitor waiting for the guard to pass.

11. Player walking out to vehicle (Game Over)

- a. There is an exit in front of the player with a vehicle waiting. The player sees an exit and a vehicle waiting for them. They made it to the vehicle and escaped their cell successfully. When they make it to the end a successful sound. And a car starting up sounds when they are exiting the building to the vehicle.

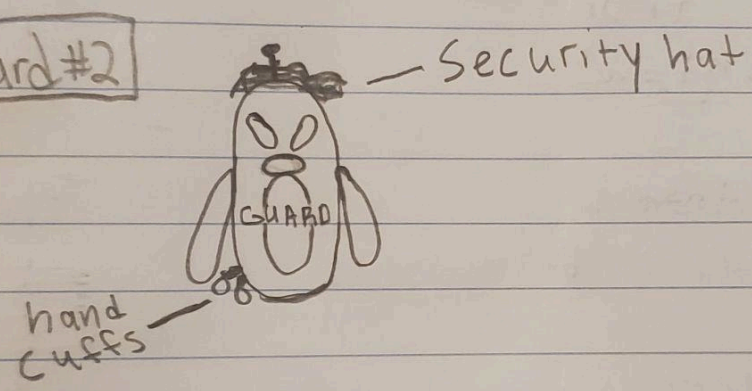

12. Game Over Screen

- a. The player finished the game/level. The player is driving in a vehicle on a road. The words "CONGRATS YOU" is written above the player and the word "ESCAPED" is written to the left of the player. In the upper right hand corner it says "SCORE: - -" with "TIME: - -" written below it. The score shows the total amount of screws/points the player collected. The time shows the length of time it took for the player to complete the game/level.
